Dear colleague,

We have learned that we will have one more opening available for a Research Associate to start this summer, so we are re-opening the position until April 30th. If you know any good student who might be interested, we would really appreciate it if you could make them aware of our opening. In particular, students who applied to grad school but were not completely satisfied with their admissions might be especially interested, and would make a great fit.

Candidates should apply for the RESEARCH ASSOCIATE position (posted until April 30th, position number 239161) online at http://www.richmondfed.org/about_us/careers/job_openings/. A brief job description is included below, and a longer one is available online. Please share this email with your colleagues. Thanks very much.

Arantxa Jarque

Research Associate opening:
The Research Department has an opening for a Research Associate reporting to the Economists in this area. In this entry level role, you will perform economic and statistical analyses to support the research initiated by Economists. This research is in part policy-oriented, and in part academic, aimed at publication in top journals. Much of the analysis will be conducted on personal and mainframe computers, using mathematical and statistical software such as Matlab, Gauss, Stata and R. You will present results of research to economists and management in oral or written reports on an as needed basis, and at times within tight deadlines.

(Note that only applications from U.S. citizens or green card holders will be considered.)
